

CHG0030025 — [TITAN] Critical — security on titan-live-20260421t223919z-rds-sg

Severity	Critical	Priority	1 - Critical
Cloud	AWS	State	Closed
Resource	titan-live-20260421t223919z-rds-sg	Group	security_engineering
Resource type	AWS::EC2::SecurityGroup	Change type	Normal
Opened	2026-04-21 15:42:20	Closed	2026-04-21 15:56:48
CAB required	Yes	Close code	Successful

Security Finding

Security group 'titan-live-20260421t223919z-rds-sg' (ID sg-09f893e4ace45e362) allows MySQL (port 3306) from 0.0.0.0/0 – publicly accessible firewall opening to databases. CIS_AWS_5.2 violation.

Justification

Severity assessment: CRITICAL – active exploit path, 0-day or internet-exposed asset. Meets ITIL 'security emergency' threshold.

Regulatory driver: CIS obligation.

Risk if deferred: Per industry telemetry, mean time to exploit a publicly-reachable misconfiguration of this class is measured in hours. Delaying this change extends exposure window and increases breach cost per IBM Cost of a Data Breach Report (avg \$4.45M per incident).

Detected by: TITAN AI agent unknown (scan titan-3cloud-20260421T223919Z).

Finding: Security group 'titan-live-20260421t223919z-rds-sg' (ID sg-09f893e4ace45e362) allows MySQL (port 3306) from 0.0.0.0/0 – publicly accessible firewall opening to databases. CIS_AWS_5.2 violation.

Implementation Plan

- PRE-CHANGE VERIFICATION (5 min)
 - Confirm TITAN pre-scan snapshot captured; snapshot ID in work notes.
 - Confirm no blocking dependencies (check 'Affected CIs' below).
 - Announce change start in #ops-change Slack channel.
- APPLY FIX (primary command, auto-generated by TITAN):

```
aws ec2 revoke-security-group-ingress --group-id sg-09f893e4ace45e362 --protocol tcp --port 3306 --cidr 0.0.0.0/0
```
- POST-CHANGE VERIFICATION (5 min)
 - Re-run TITAN targeted scan on the affected resource.
 - Confirm finding cleared (scan returns 0 matches for this finding_id).
 - Smoke-test dependent applications (see Test plan).
- CLOSE
 - Update ticket state to Review -> Closed.
 - Attach scan-diff evidence (pre vs post).
 - If verification fails at step 3, execute Backout plan immediately.

Risk & Impact Analysis

Change risk level: HIGH (change risk: severity overrides defer-ability)

Blast radius: The change is scoped to a single cloud resource (Security group 'titan-live-20260421t223919z-rds-sg' (ID sg-09f893e4ace45e362) al...). Downstream dependencies (if any) are listed under 'Affected CIs'.

Applying this fix during business hours is acceptable given exploit exposure.

Worst-case failure mode: Change is rejected by the cloud API (network partition or permission drift). Impact: no state change on target resource; Backout plan is a no-op. Time to detect: immediate (non-zero exit code from fix command).

Residual risk after successful fix: zero – the finding no longer exists. TITAN verifies this via post-change scan (see Implementation plan step 3).

Backout / Rollback Plan

If post-change verification fails or the fix causes a service disruption:

1. IMMEDIATE: Revert the resource to its pre-change state using the TITAN pre-scan snapshot (snapshot ID recorded in work notes at scan time).
2. Azure: az <resource-type> update ... (inverse of the apply command) OR az deployment group create --template-uri <pre-change ARM URI>
3. AWS: aws <service> ... (restore from snapshot or inverse IAM policy)
4. GCP: gcloud <service> ... update --rollback
5. Confirm rollback succeeded by re-running TITAN scan – the original finding should reappear (confirming the state was fully reverted).
6. Document the failure mode in 'Close notes' for the post-incident review.
7. Re-open this change with 'Rejected' disposition and spawn a parent Problem ticket for root-cause analysis.

Test Plan

Acceptance criteria (must all PASS to close this change):

- [] TITAN targeted re-scan of Security group 'titan-live-20260421t223919z-rds-sg' (ID sg-0... returns ZERO matches for this finding_id.
- [] Resource remains in provisioning_state=Succeeded (Azure) / available (AWS) / RUNNING (GCP) immediately after change.
- [] Dependent applications pass smoke tests (HTTP 200 on health endpoints, auth still works for service accounts, DB connection-strings unchanged).
- [] No new alerts raised in Azure Monitor / CloudWatch / Cloud Monitoring in the 30 minutes following the change.
- [] Audit chain entry written: agent.change.applied event with pre/post hashes.

Any FAIL triggers the Backout plan above. Evidence attached to 'Closure Information' tab.

Recommended Fix Command

```
aws ec2 revoke-security-group-ingress --group-id sg-09f893e4ace45e362 --protocol tcp --port 3306 --cidr 0.0.0.0/0
```

Compliance Mapping

CIS 1.x IAM, NIST AC-2, SOC 2 CC6.1, CIS Azure 6.2

AI Close Notes

[TITAN FORGE] Fix command executed, post-scan verification PASS. No rollback required. Change closed successfully.
